

Major Accident Prevention Policy

4 Bostock Place

Chemical Freight Services (Chemfreight) operates the 4 Bostock Place site, which has been designated as a lower tier Major Hazard Facility under the Health and Safety at Work (Major Hazard Facilities) Regulations 2016.

As required by the MHF Regulations, Chemfreight has developed a Major Accident Prevention Policy (MAPP) that demonstrates that all potential major incidents (e.g., fires, explosions) have been identified and Chemfreight has the ability, means and adequate controls in place to minimise the risks of these incidents so far as is reasonably practicable.

The MAPP provides assurance to workers, emergency services, the community and others that the potential for major incidents has been systematically assessed and that effective and suitable controls are in place.

Established by Harry Price in 1989, Chemfreight is a family-owned business and the first specialist third party logistics (3PL) provider of Hazardous storage for the packaged market.

Chemfreight specialise in providing a complete 3PL solution that takes care of the storage, handling and transport of Hazardous and non-hazardous products.

Our 4 Bostock Place site in East Tamaki, Auckland is a hazardous storage site with purpose built and dedicated warehouses and bunkers designed to standard to store hazardous and non-hazardous goods.

Chemfreight is committed to the prevention and management of major incidents. A primary company objective, so far as is reasonably practicable, is to ensure a working environment that is safe for its workers, contractors and everyone associated with our business.

What to do in the event of a major incident

The identified major incidents from the 4 Bostock Place site that have a potential offsite consequence affecting the local community are events that cause a loss of containment of flammable or toxic material that, if ignited, could result in a fire, explosion or a toxic plume.

- A site siren, which is audible offsite, is sounded to alert on-site personnel only and does not require any immediate community action.
- If there is a possibility of the public being affected in the event of a major incident related fire or toxic release at the 4 Bostock Place Site, Fire and Emergency New Zealand will assume control of any major incident emergency on their arrival at site in collaboration with Chemfreight, local authorities and other emergency service organisations (e.g., Auckland Council, New Zealand Police, Civil Defence).
- The local community will be updated during a major incident emergency as required and Chemfreight asks that you follow any emergency action instructions given and communication with local authorities or emergency service organisations until you are informed of termination of the emergency.
- Following a major incident emergency, the local community, neighbours and surrounding facilities will be provided with information about the major incident and actions being taken via pamphlets

General Advice

1. Remain indoors, close windows and doors
2. Search social media and local radio for information
3. Please do not call the site
4. Stay away from the site
5. Adhere to road closures/diversions
6. Self-evacuate out of the area if you feel more comfortable
7. Seek medical attention if you feel impacted

Further Information

The information provided in this pamphlet will be reviewed and revised as required if a change is made to the Safety Case and the major incident risks on site.
